DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-4 and 6-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Martelli et al in view of Pischinger et al. Martelli et al discloses the claimed invention except for the engine being a diesel engine with the closing timing of the exhaust valve and the retarded opening of the intake valve. Pischinger et al teaches that it is known to provide the exhaust valve closing in advance of a retarded opening of the intake valve as shown in Figure 8. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the valve timing of

Art Unit: 3747

Martelli et al by providing an exhaust valve closing in advance of a retarded opening of the intake valve as taught by Pischinger et al in order to control the amount of residual exhaust gas. Furthermore, it would have been an obvious matter of design choice to provide the engine of Martelli et al be a diesel engine since applicant has not disclosed that the variable valve timing could only be used on a diesel engine and it appears that the variable valve timing system of Martelli et al would perform equally well on a diesel engine.

Allowable Subject Matter

Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references of Russ et al, Abo et al, Geiser and Koseki et al are cited to show valve timing for regulating internal EGR.
